

CRR Binomial Option Pricing Pipeline

Full Build Pipeline Flowchart

A five-page walkthrough of every component across three pipeline layers: CRR Pricing Engine (L1), Prediction Market ML Extensions (L2), and the Cross-Model Comparison (L3).

L1 CRR Pricing Engine **L2** ML Extensions **L3** Cross-Model Comparison

CRR Binomial Tree ($N = 4$)

Build Pipeline

Three independent layers connected by shared edge signals.

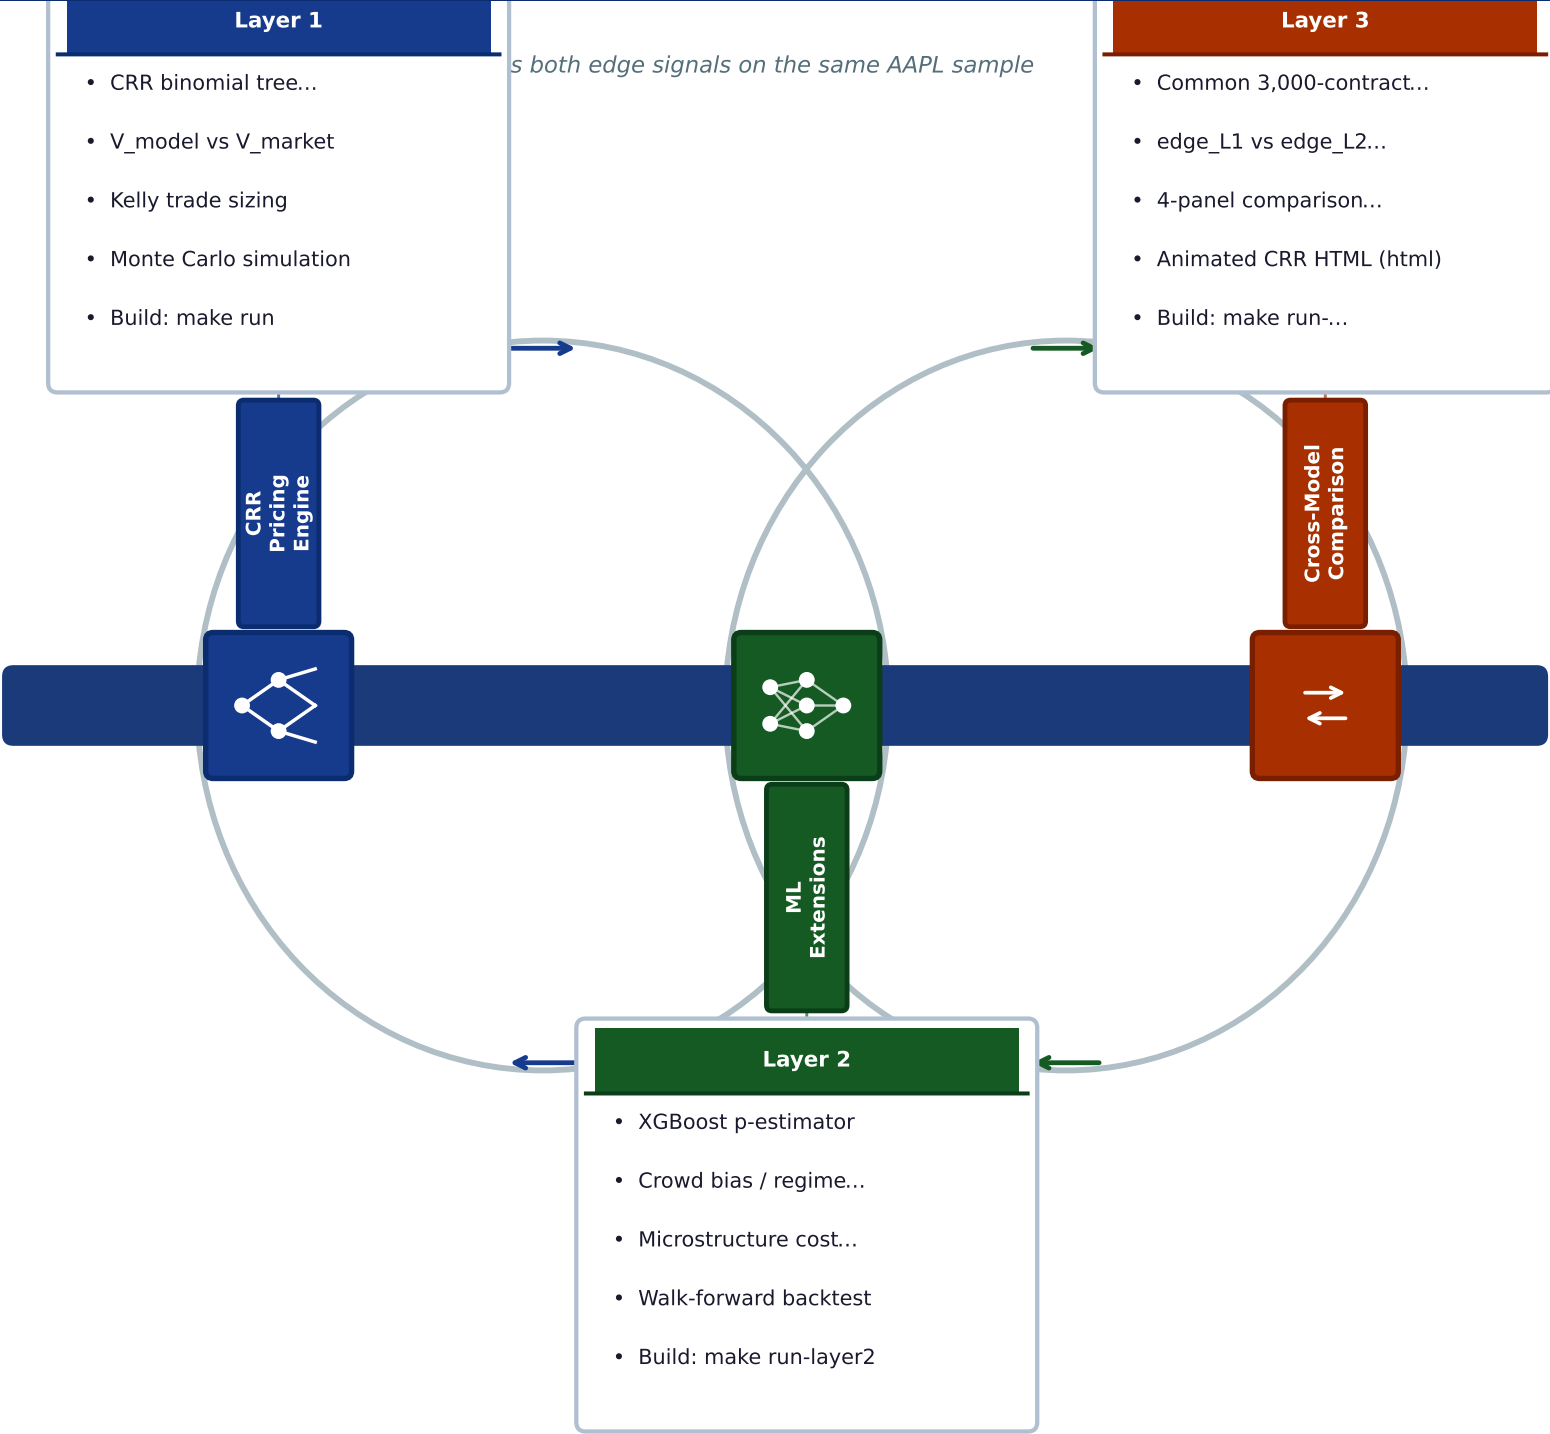

LAYER 1 CRR Pricing Engine

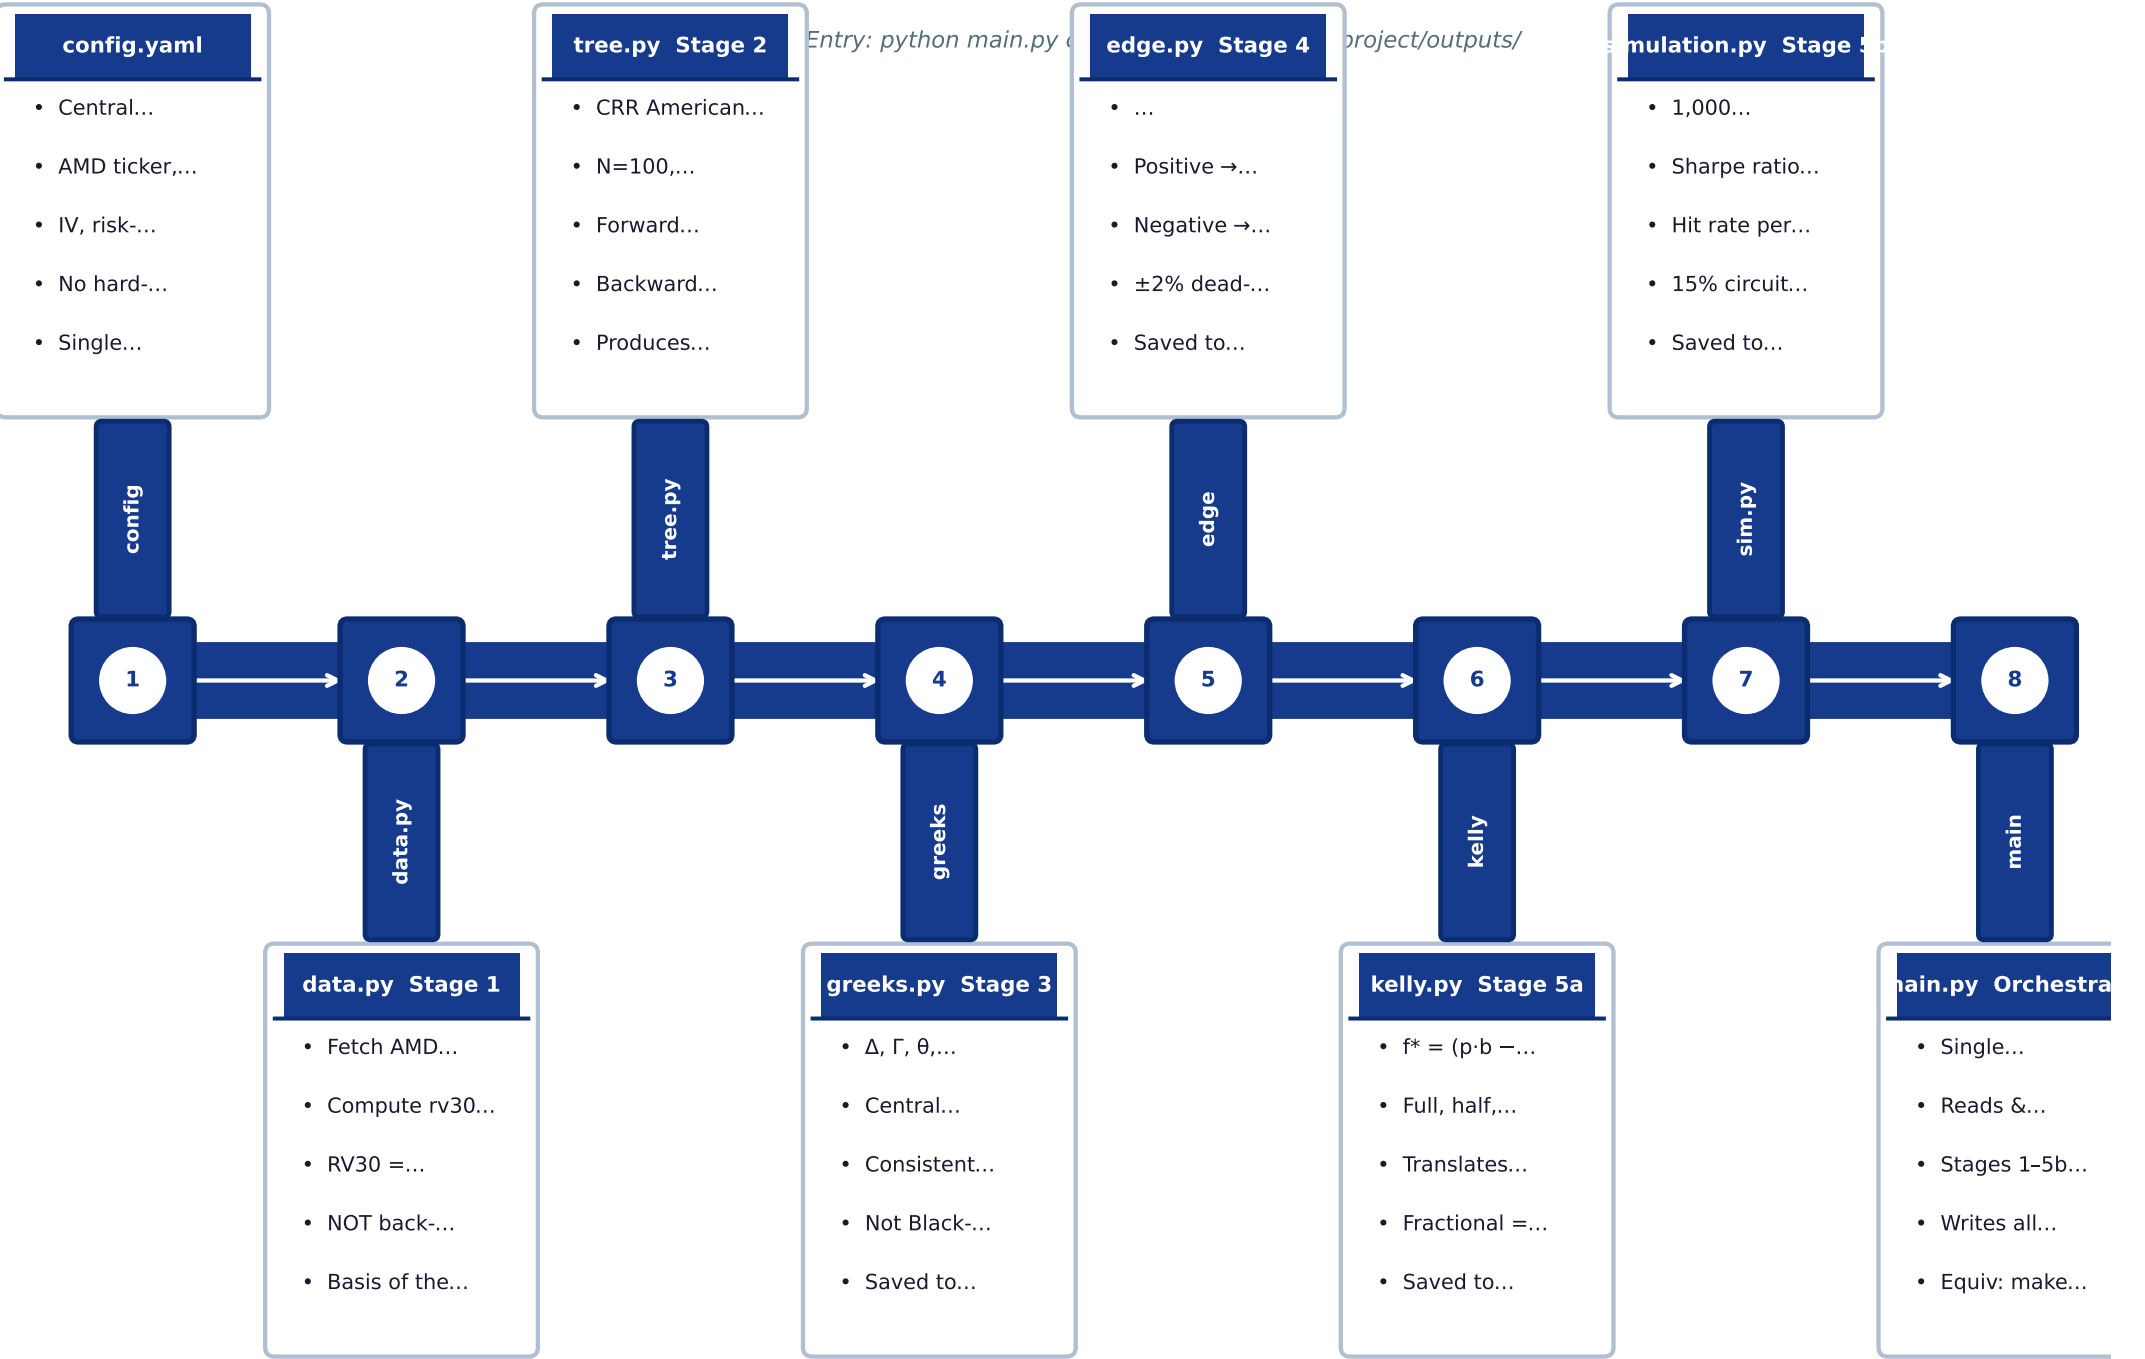

LAYER 2 ML Extensions

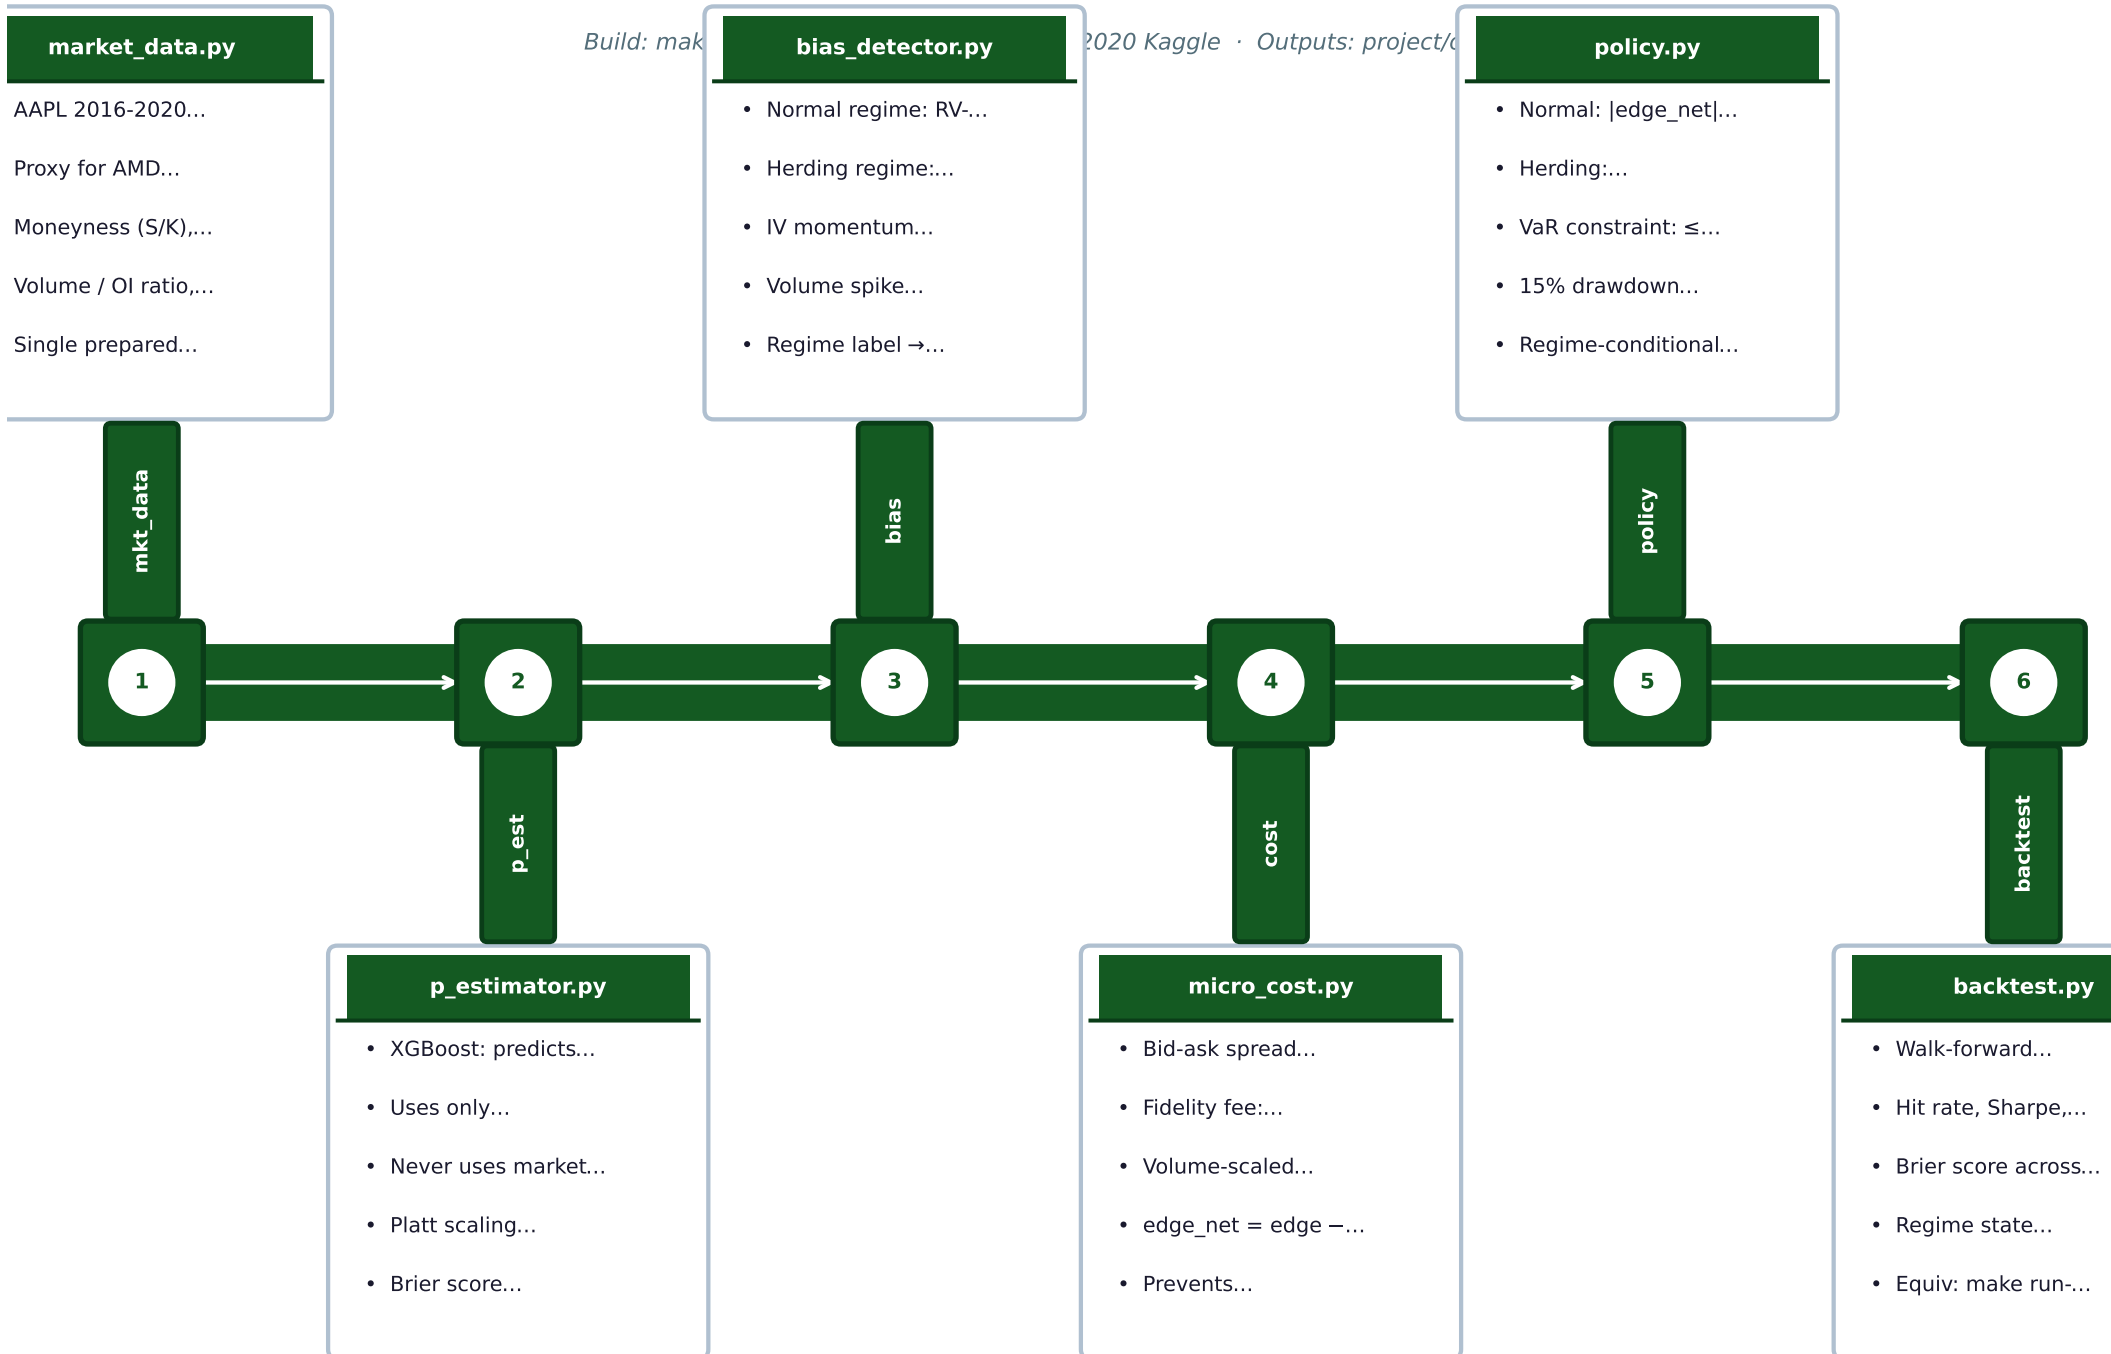

LAYER 3 Cross-Model Comparison

make run-all

Chains all three layers in sequence automatically.

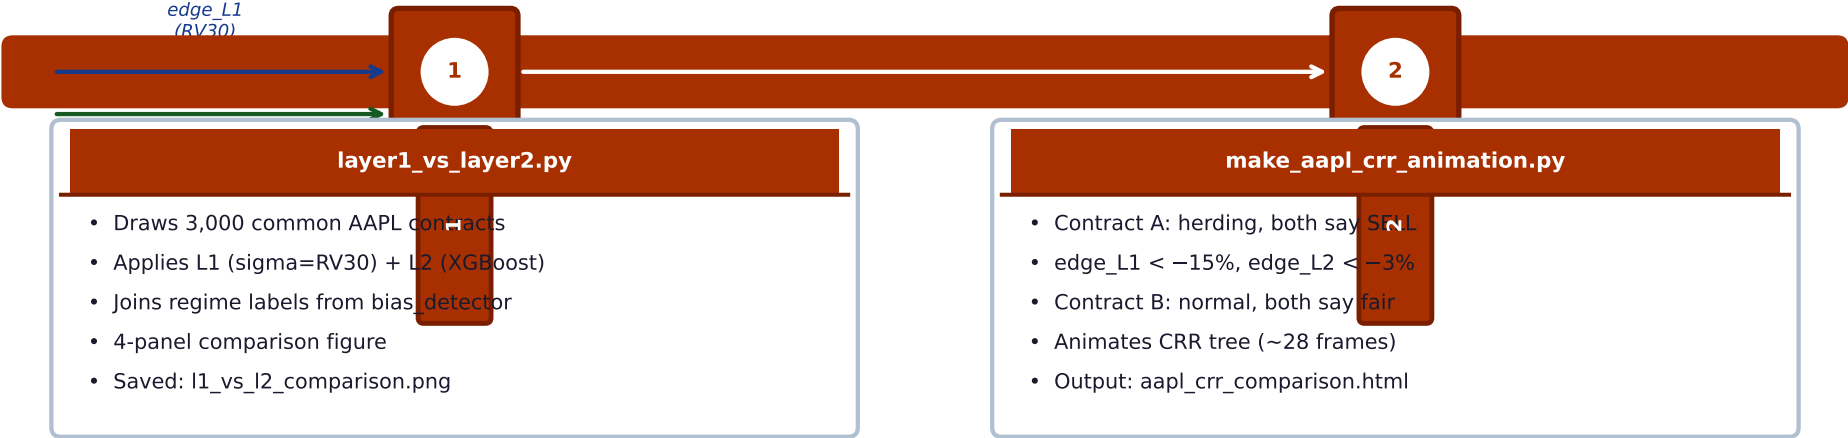

Core Scientific Question

Do CRR (mathematical, no-arbitrage) and XGBoost (empirical, ML) independently agree on which AAPL options the crowd misprices? Agreement validates both models simultaneously; disagreement zones are findings in their own right.
